

# Databases & Web Services Project 2023

## Assignment 6

---

Peter Baumann, Constructor University

**Submission:** by team, through git repository

**Deadline:** 2023-oct-26 23:59

### Search Component

Implement the queries defined in your earlier assignment, N queries for team size N. For each query, establish the following pages:

- search form (input attributes taken from your query design done earlier)
- search result list displaying elements found (or an error message if necessary).

Each item in the result list must have a link to the detail result page displaying a single item of the result list. Therefore, you need to implement a third type of result pages, namely: presentation of a single result record.

### Submission:

- Website, accessible via Web browser in the project's Web directory **and** in git repo
