

Databases & Web Services Project 2023

Assignment 8

Peter Baumann, Constructor University

Submission: by team, through git repository

Deadline: 2023-nov-09 23:59

Web Log Evaluation

Now let us see who has accessed your website, and how often. Write a server-side script in your favorite language which accesses the Apache request and error logs and extracts statistics about your pages specifically:

- How often was each page accessed, by whom (ie: IP address), and when? What browsers? Create a timeline diagram.
- What errors occurred, originated by whom and when? Again, provide a timeline diagram.

Notes:

- if you find your service has not been called often enough (well, we did not do any advertisement) then simply generate a few clicktrails by invoking our own service from your PCs.
- You can implement it yourself (not much work around a spreadsheet tool) or you can find some tool on the Internet (if so make sure you indicate which one).

Submission:

- PDF with statistics = diagrams
- Script, in repository (let TAs know where it sits!)
